

Technology Enabled Laundry Experiences

Changing Environment and Demands

Consumer demands have changed and are no longer just about convenience. Residents want to touch less, pay without cash and know when laundry rooms are less crowded. CSC is using advanced technologies to deliver safer and smarter laundry room experiences.

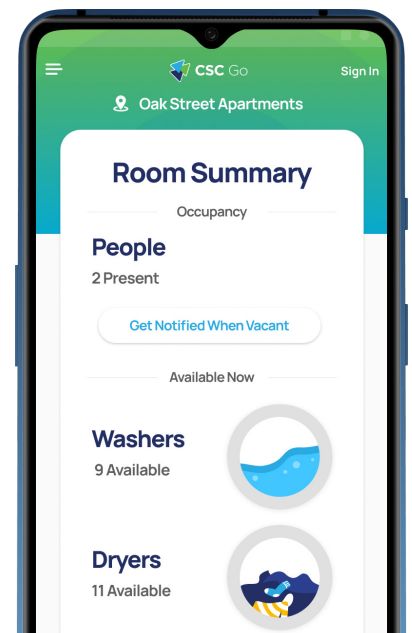

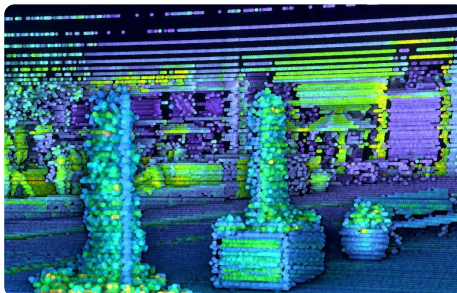

How Our Technology Works Inside The Laundry Room

An optical sensor can anonymously detect room traffic and conditions like damaged machines.

CSC leverages IoT technology and equips machines and rooms with Wi-Fi enabled devices that securely process digital payments and monitor machine health.

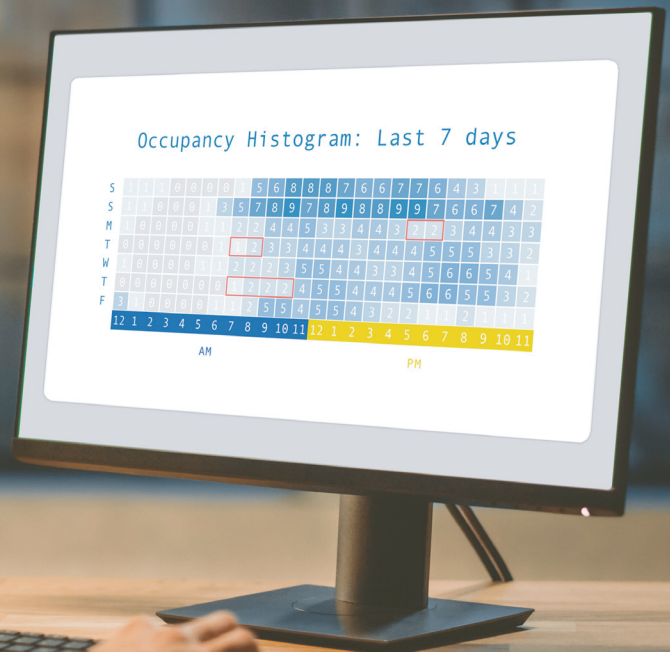

SIMULATED IMAGES

How Our Technology Works Outside The Room

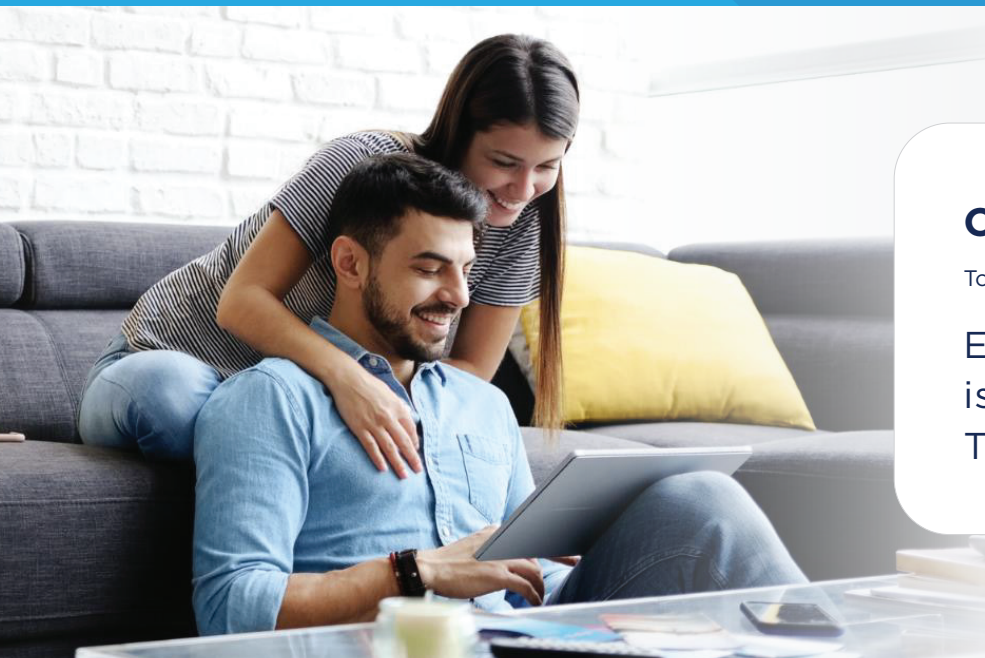

Transmitted data is used by CSC and clients to automatically dispatch service, track machine history and quickly process refunds.

A host of other actions allow us to optimize overall performance and resident satisfaction.

Safer & More Convenient Resident Experiences

Vital information can also be shared with residents and families, allowing them to save time and stay home more; supporting overall safety and social distancing efforts in our communities while also delivering the ultimate convenience.

Oak Street Apartments

To: Residents

East laundry room
is least crowded on
Tuesday from 12PM-3PM.
